Subject: Water Supply for November and December 2017

Date: September 28, 2017

This is an update of water supply availability for the remainder of this year.

- Our adopted tiered pricing schedule and quantities will remain in effect through all of September and October.
- Beginning November 1, we are able to begin using our 5-month winter block of water, and all water for the rest of the year will be sold at our 2017 Tier 1 rates without allocation limits (\$15.00 per a.f. for in-District and \$40.00 per a.f. for Class 2).
- Depending on the weather, we expect that the water supply will last at least through the middle of December, but the length of time that the water will be available will be determined by the demand of the growers within the District's service area. As in the past, water will be delivered on a first-come, first-served basis until the supply has been depleted.

Please be aware that there are locations within the CCID service area that will be affected by our need to perform some winter construction projects. Specifically, our Poso and Riverside Canals north of Valeria Avenue will need to be shut off and dewatered by Thanksgiving so that our contractor can proceed with our Poso Reservoir project. There are a few places where other construction and maintenance work may lead to service issues, but as always, the District will make its best efforts to keep those to a minimum. Please let our Water Department know if you have any special situations with crop needs this winter.

Depending on weather conditions and irrigation demands, we plan to begin re-filling the canal system between January 15 and February 1, 2018.

Please contact our office, at (209) 826-1421 or (209) 826-5176, if you have any questions or desire any further information.
